

NELANI MALUKA

IT SYSTEMS & SOFTWARE SUPPORT

Johannesburg · 068-071-2025 · malukanelani@gmail.com · [Github](#) · [Portfolio-Website](#)

SUMMARY

IT Systems Development graduate with hands-on experience in application support, software development, and troubleshooting. Strong foundation in networking, backend systems, and maintaining system functionality. Experienced in building and supporting applications using Java, Spring Boot, and React. Adaptable and proactive, with the ability to contribute across IT support, systems, and technical environments.

EDUCATION

IT Systems Development (NQF 4–6) – Cyber Security Focus

Completed: 2025

- NQF 6: IT Database Development
- NQF 5: IT Systems Development
- NQF 4: Systems Development

Certifications:

- Microsoft Certified: Azure Fundamentals (AZ-900)
- Microsoft Technology Associate (MTA): Programming Fundamentals (Python, HTML, CSS, JavaScript)

TECHNICAL SKILLS

Languages: Java, Python, C#, HTML, CSS, JavaScript (supporting troubleshooting understanding)

Developer Tools: Postman, Git, Windows troubleshooting tools

Libraries/Frameworks: Spring Boot, ReactJS, MySQL, PostgreSQL, .NET

Other: Linux basics, networking fundamentals (TCP/IP, DNS, DHCP), communication, teamwork, Windows OS support, Active Directory (user account management, password resets, basic administration)

PROFESSIONAL EXPERIENCE

Software & Systems Support Intern

Nov 2024 - Aug 2025

Learnhall LLC

Remote

- Developed and maintained responsive front-end websites using ReactJS, HTML, CSS, and JavaScript, improving usability and delivering smooth user-facing experiences
- Assisted with system-level updates such as managing and updating user account information (e.g., email changes) through web hosting control panel (cPanel) environments and application interfaces.
- Worked in a collaborative team environment, responding to feedback from code reviews and improving application stability and implementation quality.
- Used Git and GitHub for version control, managing branches, tracking changes, and supporting team-based development workflows.

PROJECTS

Blog Land Java | Spring Boot | ReactJS

- Built a full-stack blogging platform with Java, Spring Boot, TypeScript, ReactJS, and SQL, enabling users to create, comment, and manage posts.
- Implemented Hibernate/JPA for efficient data persistence and applied OOP (Object Oriented Programming) principles, preventing data inconsistencies and ensuring reliable storage and retrieval of posts, comments,

- likes, and user updates with real-time synchronization via WebSockets.
- Troubleshoot and resolved application issues during development, improving system stability
- Implemented performance improvements such as caching and pagination to handle larger data loads
- Implemented CI/CD pipelines using GitHub Actions to run unit tests, build Docker images from a Dockerfile, and automatically deploy the application to live environments.

AI Recipe Generator Java | Spring Boot

- Built a Java Spring Boot REST API using Maven and OpenAPI/Swagger documentation following SDLC best practices to deliver a scalable recipe generation service based on user preferences and dietary data.
- Secured the platform using JWT, Google OAuth 2.0, and RBAC(role-based access control), preventing unauthorized access and protecting user data.
- Designed and optimized SQL database schemas and queries, implementing indexing strategies to improve query performance and efficiently store user preferences, ingredients, and dietary profiles.
- Identified and resolved issues during development, improving application reliability
